What is a solar PV export tariff?

A solar PV export tariff is the payment you receive for excess solar power sent to the grid. What is the SEG and what tariffs are companies offering now?

Do you qualify for a low solar tariff?

Some energy companies have introduced temporarily high tariffs designed to persuade customers to go solar with them. To qualify, you have to get your solar panels and battery through the supplier - but once the initial 12-month export contract ends, you'll be rolled onto a lower tariff.

What is the EU export value of solar panels?

By contrast, the EU export value of wind turbines (EUR2.8 billion) was much higher than the corresponding value for imports. The EU import value of solar panels decreased by 43% between 2023 and 2024 (see Figure 2), due to a drop in prices, even though the quantity imported slightly increased by +2%.

Can I get the same export rate if I have solar panels?

Correct as at 7 January 2026. (1) You can get the same export rate if you had your solar panels and/or battery installed by E.on Next but are not a supply customer of E.on Next. (2) You can request payment more frequently, maximum of four payments a year. (3) You must sign up to Ovo Beyond, or join within 3 months of signing up to this SEG tariff.

This partnership aims to promote rooftop solar solutions for micro, small, and medium enterprises in West Bengal. The initiative will involve awareness programs to encourage the shift to ...

Solar panel exports from Vietnam, Malaysia, Thailand and Cambodia to the U.S. fell by 33% on an annual basis in the nine months since the first ...

This article presents an overview of the EU's international trade in three key product groups: wind turbines, solar panels, and liquid biofuels. It compares these categories, traces their developments ...

The carbon tariff structure creates fascinating environmental paradoxes. Production relocation to Europe can reduce module carbon footprints by up to 40% thanks to cleaner energy grids.

The implementation of solar panel tariffs has triggered significant shifts in global manufacturing patterns, with producers adapting their strategies to maintain market competitiveness.

You could get paid up to 25p/kWh for electricity you generate from your solar panels and export to the National Grid. This guide explains how to get the best solar export rates.
